

## TREATMENT OF SEPTIC SLUDGE AT DANISH WASTE WATER TREATMENT PLANTS.

**Landia chopper pumps have a great record of application in septic sludge.**

**Septic sludge is raw unscreened sewage often delivered by tanker trucks from remote sites such as summer houses, camping sites, harbours, etc.**

**Septic sludge contains many different solids tending to clog up pumps, everything people possibly can flush down a toilet!**

**At this particular plant, a DG-I 4,0 kW –1500 kW was installed in a reception tank of 3,5 meters in diameter, 3,57 meters heighth, a volume of 30 m<sup>3</sup>, with an automised system to automatically flush the tank contents before pumping.**
